Contents

1 Preface **1**

2 Sets, relations, functions **3**
2.1 Sets, relations, functions 3
2.1.1 Sets and relations 3
2.1.2 Functions 5
2.2 Exercises 6

3 Sets of numbers **9**
3.1 Real numbers 9
3.1.1 The axiomatic system of real numbers 9
3.1.2 Natural, whole and rational numbers 11
3.1.3 Upper and lower bound 12
3.1.4 Intervals and neighborhoods 13
3.1.5 The powers of real numbers 14
3.2 Exercises 15
3.3 Complex numbers 18
3.3.1 The concept of complex numbers, operations 18
3.3.2 The trigonometric form of complex numbers 19

4 Elementary functions **23**
4.1 The basic properties of real functions 23
4.2 Elementary functions 24
4.2.1 Power functions 24
4.2.2 Exponential and logarithmic functions 28
4.2.3 Trigonometric functions and their inverses 30
4.2.4 Hyperbolic functions and their inverses 36
4.2.5 Some peculiar functions 40
4.3 Exercises 42

5 Sequences, series **45**

5.1 Sequences, series 45
5.1.1 The concept and properties of sequences 45
5.1.2 The limit of a sequence 47
5.1.3 Series 48
5.2 Exercises 50

6 Continuity **55**
6.1 Continuity 55
6.1.1 The concept and properties of a continuous function . 55
6.1.2 The relationship between continuity and the operations 56
6.1.3 The properties of continuous functions on intervals . . 57
6.2 Exercises 58

7 Limit of a function **61**
7.1 Limit of a function 61
7.1.1 Finite limit at a finite point 61
7.1.2 Limit at infinity, infinite limit 63
7.1.3 One-sided limit 65
7.2 Exercises 68

8 Differentiability **69**
8.1 Differentiability 69
8.1.1 The concept of derivative and its geometric meaning . 69
8.1.2 Derivatives of the elementary functions, differentiation rules 72
8.1.3 The relationship between the derivative and the properties of the function 74
8.1.4 Multiple derivatives and the Taylor polynomial 76
8.1.5 L'Hospital's rule 78
8.2 Exercises 79

9 Integrability, integration **83**
9.1 Integration 83
9.1.1 The concept and geometric meaning of the Riemann integral 83
9.1.2 Relationship between the Riemann integral and the operations 86
9.1.3 Newton–Leibniz formula 87
9.1.4 Primitive functions 90
9.1.5 The applications of integrals 91
9.1.6 Fourier series 99
9.1.7 Improper integrals 101
9.2 Exercises 102

10 Sequences and series of functions **107**
10.1 Sequences and series of functions 107
10.1.1 Sequences of functions 107
10.1.2 Series of functions 112
10.1.3 Power series 113
10.2 Exercises 115

11 Multivariable functions **119**
11.1 Multivariable functions 119
11.1.1 The n-dimensional space 119
11.1.2 Multivariable functions 121
11.1.3 Limit and continuity 124
11.2 Exercises 126

12 Differentiation of multivariable functions **129**
12.1 Multivariable differentiation 129
12.1.1 Partial derivatives 129
12.1.2 The derivative matrix 131
12.1.3 Tangent 134
12.1.4 Extreme values 135
12.2 Exercises 136

13 Line integrals **145**
13.1 Line integrals 145
13.1.1 The concept and properties of line integral 145
13.1.2 Potential 148
13.2 Exercises 151

14 Differential equations **153**
14.1 Differential equations 153
14.1.1 Basic concepts 153
14.1.2 Separable differential equations 154
14.1.3 Application 155
14.2 Exercises 156

15 Integration of multivariable functions **159**
15.1 Multiple integrals 159
15.1.1 The concept of multiple integral 159
15.1.2 Integration on rectangular and normal domains 160
15.1.3 The transformation of integrals 163

16 Vector analysis **165**
16.1 Vector analysis 165

16.1.1 Space curves 165
16.1.2 Surfaces 170
16.1.3 The nabla symbol 175
16.1.4 Theorems for integral transforms 176
16.2 Exercises 177
